

Helpdesk Ticketing Software

A Project Report Submitted by

Vats Sanghvi –91800104028

in partial fulfilment for the award of the degree of

Bachelor of Technology

in

Information Technology

Faculty of Technology

Marwadi University, Rajkot

2021-22

Faculty of Technology
Marwadi University
Computer Engineering Department
2021-22

CERTIFICATE

This is to certify that the project entitled **Helpdesk Ticketing Software** has been carried out by **Vats Sanghvi - 91800104028** under my guidance in partial fulfilment of the degree of Bachelor of Technology in Information Technology of Marwadi University, Rajkot during the academic year 2021-22.

Date:

Internal Guide

Dr. Manisha
Assistant Professor

Head of the Department

Dr. Damodharan Palaniappan
Head of the Department

TO WHOMSOEVER IT MAY CONCERN

This is to certify that **Vats Sanghvi** of **Faculty of Technology, Marwadi University** has worked on an User Defined Project. The work embodied in this project entitled, “**Helpdesk Ticketing Software**” has been carried out in fulfilment for the degree of Bachelor of Technology. He has undergone the project for the required period. During this period we found him sincere, honest and diligent. We wish all success in his future endeavours.

Dr. Manisha

Date:

Acknowledgments

I have taken efforts in this project. However, it would not have been possible without the kind support and help of many individuals. I would like to extend my sincere thanks to all of them. I am highly indebted to Dr.Manisha for their guidance and constant supervision as well as for providing necessary information regarding the project & also for their support in completing the project. I would like to express my gratitude towards my parents for their kind cooperation and encouragement which help me in completion of this project.

Institute's Vision and Mission

Institute's Vision

Our vision is to address challenges facing our society and planet through sterile education that builds capacity of our students and empower them through their innovative thinking practice and character building that will ultimately manifest to boost creativity and responsibility utilizing the limited natural resources to meet the challenges of the 21st century.

Institute's Mission

- To Produce creative, responsible and informed professionals
- To produce individuals who are digital-age literates, inventive thinkers, effective communicators and highly productive.
- To deliver cost-effective quality education
- To offer world-class, cross-disciplinary education in strategic sectors of economy though well devised and synchronized delivery structure and system, designed to tackle the creative intelligence and enhance the productivity of individuals.
- To provide a conducive environment that enables and promotes individuals to creatively interact, coordinate, disseminate and examine change, opinion as well as concept that will enable students to experience higher level of learning acquired through ceaseless effort that lead to the development of character, confidence, values and technical skills.

Department's Vision and Mission

Department's Vision

To impart quality technical education through research, innovation and teamwork for creating professionally superior and ethically strong manpower that meet the global challenges of engineering industries and research organization in the area of Computer Engineering.

Department's Mission

- Maintain a vital, state-of-the art ICT enabled teaching and learning methodologies, which provides its students and faculty with opportunities to create, interpret, apply and disseminate knowledge.
- Enable graduates in becoming digital age literates, innovators, efficient communicators and result oriented professionals.
- Dedicate itself to providing its students with the skills, knowledge and attitudes that will allow its graduates to succeed as engineers, leaders, professionals and entrepreneurs.
- Prepare its graduates for life-long learning to meet intellectual, ethical and career challenges.
- Inspire graduates for competitive exam higher education as well as research and development.

PEO, PO and PSO

Program Educational Objectives (PEO):

Our graduated students are expected to fulfill the following Program Educational Objectives (PEOs):

1. **Core Competency:** Successfully apply fundamental mathematical, scientific, and engineering principles in formulating and solving engineering and real life problems for betterment of society.
2. **Breadth:** Will apply current industry accepted practices, new and emerging technologies to analyse, design, implement and maintain state of art solutions.
3. **Professionalism:** Work effectively and ethically in ever changing global professional environment and multi-disciplinary environment.
4. **Learning Environment:** Demonstrate excellent communication and soft skills to fulfil their commitment towards social responsibilities and foster life-long learning.
5. **Preparation:** Promote research and patenting to enhance technical and entrepreneurship skills within them.

Program Outcomes (POs)

Engineering Graduates will be able to:

PO1: Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2: Problem analysis: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3: Design/development of solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4: Conduct investigations of complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO5: Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

PO6: The engineer and society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

PO7: Environment and sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

PO8: Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

PO9: Individual and team work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

PO10: Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend

and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

PO11: Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

PO12: Life-long learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Program Specific Outcomes (PSOs)

PSO1. Students shall demonstrate skills, the knowledge and competence in the analysis, design and development of computer based systems addressing industrial and social issues.

PSO2. Students shall have competence to take challenges associated with future technological issues associated with security, wearable devices, augmented reality, Internet of Anything etc.

Abstract

The project entitled,” Helpdesk Ticketing Software” is used to solve the problem of customer satisfaction. The problem can be stated as nowadays customers are facing the problem for their services of hardware and software parts of the system. And their service time used to get increased due to lack of coordination between the service provider and customer. Here, a solution for enhancing the coordination within the company is proposed e.g. an IT service provider company consists of an admin, three managers, and other employees. If any customer filed a complaint related to software and hardware, then the admin, as well as the customer, can keep track of how this complaint is getting solved.

1. Introduction

1.1 Project Summary

By this problem we are trying to convey that a company can get to know whether the task assigned to any employee is completed in a given time period or not and the requests that are sent by customer are completely fulfilled and take necessary action or not.

1.2 Aim and Objectives

Aim

To assign customer request to particular person and show status of every step to customer

Objectives

To check the accountability of a employee so that the company can get to know how much time he/she takes to complete the task

1.3 Problem Specifications

User Creation

- Id
- Name
- Mail id
- Mobile No
- Role

Ticket Creation

- Login
- Password
- Ticket No
- Problem Statement
- Problem Description
- Group
- Priority

Ticket Assign

- Group
- Priority
- Assign To

Ticket Creation

- Resolution(Ticket status)
- Ticket Status

Dashboard

- We can see the status of assigned of open and closed ticket
- We can also see how much high priority, medium priority, low priority tickets are pending.

1.4 Literature review

Various case studies have highlighted the problems faced while setting up this process. Some of the problems found during the survey in the existing system are listed below:

- Some people faced problem while logging through their personalized profile and in that also they were not able to see properly which tickets of them are pending
- Some people were facing problem whether there is any update on their ticket from the time of generation till now

1.5 Plan of the work

The system enables the customers to report an issue, submit a request, and communicate with an IT agent through helpdesk tickets. It also supports prioritizing a ticket, classifying a ticket, assigning a ticket to a manager, editing a ticket description using a rich quality text editor, and changing the ticket status. In addition, it also allows managing services, administering user roles, generating automatic email notifications along with sms notification. Moreover manager is also able to interact with customer through whatsapp interface [1]. The literature review in this reference concentrates on planning and methodologies. Furthermore, we can conclude that after doing the analysis of the current system it delivers us with a whole new system and a data flow diagram [2].

1.6 Materials and Tools required

Hardware requirement for the development and deployment of the project

- Processor greater than i3
- Ram more than 8gb
- 1tb HDD

Software requirement for the development and deployment of the project

- Database – My SQL
- Back End - Django
- Front End – Html, CSS, Boot Strap, Java Script

2. Analysis, Design Methodology and Implementation Strategy

2.1 Observation Matrix

3. Implementation

3.1 Implemented Functionality

- How to raise a ticket

- How to create a user
- How to manage a ticket
- How to create categories,subcategories
- How to make individual view for users
- How to keep updated the customer with every updation of his/her ticket with email
- How manager can easily communicate with customer through whatsapp.

3.4. Testing and verification

In this project i have done in testing like if a user enters invalid details while signing in then user will not be able to sign in, when user go to the ticket details page and at that time in url if he changes the number of the ticket then user will be redirected to home page and error will be

shown that you are not allowed to view this page and in this i have also given permission to the specific user like for how much he can see and edit.

4. Conclusion

4.1 Summary of the results

The project works seamlessly in local development environment and every functionality intended to be developed was developed to the best of the ability. With the lack of resources for deployment the performance of this project in real world is unmeasured.

4.2 Advantages

So the advantage of this project is that we can know like how much time our employees are taking and if they are taking less time are they properly fulfilling the work or not. it has a detailed and a mannered view of all the things which are needed for this project. Customers or viewers can have a good dashboard type thing in which they can see how many of their tickets are pending, assigned closed without completion ,closed with completion.

4.3 Scope of future work

In future we would like to implement an option to enhance your skills by various courses that would be available free on the platform. We would also like to add all the required proctoring measures to provide a fair environment for all the viewers.

4.4 Unique features

- Full Customization
- Workflow automation
- Personalized ticket pages
- Ticket categories and tags
- Team empowerment
- Customer experience oriented

Attainment of POs and PSOs

PO / PSO	Attainment Level	Justification
PO1	2	Solution based on Information Technology subjects
PO2	3	Reviewed problem thoroughly by studying literature review.
PO3	2	Designed solution that meet the specified needs
PO4	0	NA
PO5	3	Developed solution with Python Django Framework.
PO6	2	This project keeps all environmental aspects and provides no harm to the society or environment
PO7	1	Self developed project but took help from the internet
PO8	3	Self developed project.
PO9	3	Communicated with many people thus understood the actual requirements of the solution.
PO10	3	Completed the project in a concise time frame and managed all the resources related to the project nicely
PO11	2	Gained much knowledge that is useful by developing this project
PO12	3	This project is developed by using Python Django Framework.
PSO1	3	Project will be improved going forward.

PSO2	1	This project keeps all environmental aspects and provides no harm to the society or environment.
